

152% growth rate,  
1 goal: **Seamless operations**

There are approximately 660,755 restaurants and 66,602 bars, taverns, and nightclubs in the US. And a large chunk of them, which still manages back of house tasks conventionally, was mulling to embrace the digital way to achieve operational excellence. So, when Accucode asked to embed technology-led innovation and digital capabilities that aligned with the restaurant functions, we knew this particular solution was going to have a lot of unique tastes.

### Snapshot

**Challenge:** Lack of a centralized information system which bungled the restaurant business operations, hampering growth and profitability.

**Solutions:** Developed an innovative technology platform, providing real-time and centralized information system to restaurants in order to support and ensure seamless operations.

**Benefits:** Real-time reporting; effective decision-making; task prioritization; predictive analysis; accurate assessment; flawless communication.

Outcomes included  
**Labor hours**  
reduced by  
**50%**

### Key Challenges

1. Effective operations are crucial for running a restaurant. However, the client was struggling with unorganized workflow which forced the management to live in the weeds. They had a fragmented business environment and confounding tasks and functions while handling the restaurant business operations.
2. Existing systems did not give clear and real-time visibility, connectivity, accessibility, and control of processes, tasks, and functions, bungling the overall business performance.
3. Legacy inventory management system performed limited functions and did not support customizations as per the new and perpetually changing process requirements.

# Our Solution

We collaborated with Accucode to build a centralized technology platform that streamlined the business information flow, boosted decision-making ability, and supported real-time communication, visibility, and remote accessibility for seamless restaurant business operations.

Together we developed an innovative technology roadmap that acted as a real-time convergence platform for stakeholders including restaurants, supply networks, and fulfillment centers. The new technology platform essentially helped in reducing the turnaround time and speeding up processes, leading to a consistent business growth.

The robust information technology foundation, which supplanted the customer's existing inventory management system, consisted of a robust governance model that kept restaurant business operations on the rails. It helped the restaurants prioritize tasks and ensured that the assessment and analysis was done with precision, establishing an intelligent business framework.
